In fluid dynamics, a stall is a reduction in the lift coefficient generated by a foil as angle of attack increases. This occurs when the critical angle of attack of the foil is exceeded. The critical angle of attack is typically about 15 degrees, but it may vary significantly depending on the fluid, foil, and Reynolds number.. Stalls in fixed-wing flight are often experienced as a sudden ...

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases.It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...

WE OFFER FREE TUTORIALS AND RESOURCES from degree level to certificate level. Search the menu on the left.Modules are free to download and print in pdf format. For download help click below..

PROFESSIONAL DEVELOPMENT - We want to help students develop their qualifications on the way to becoming a Chartered Engineer with a Professional Institution.

### **Untitled 1 [www.freestudy.co.uk]**

Mechanics describes and predicts the conditions of rest or motion of bodies under the action of forces. Engineering mechanics applies the principle of mechanics to design, taking into account the effects of forces.

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces.Stress is the average force per unit area that a ...
