Informal definition using a Turing machine as example. In the following, Marvin Minsky defines the numbers to be computed in a manner similar to those defined by Alan Turing in 1936; i.e., as "sequences of digits interpreted as decimal fractions" between 0 and 1: "A computable number [is] one for which there is a Turing machine which, given  $n$  on its initial tape, terminates with the  $n$ th digit ...

Normal Numbers and the typescript of On Computable Numbers. Another ingredient for Turing was his knowledge of the classical analysis of the real continuum. In 1933 his undergraduate friend David Champernowne had noticed and published a simple but new result about 'normal numbers'. These are infinite decimals in which the digits are uniformly distributed.
