

angiosperm origins morphological and pdf

1997, Valentin A. Krassilov, *Angiosperm Origins: Morphological and Ecological Aspects*, page 134: The notion of magnoliaceans as the most primitive living angiosperms, justified or not, does not mean that all their characters, including multilacunar nodal anatomy and the lack of tannins, are primary.

angiosperm - Wiktionary

Sirenia is the order of placental mammals which comprises modern "sea cows" (manatees and the Dugong) and their extinct relatives. They are the only extant herbivorous marine mammals and the only group of herbivorous mammals to have become completely aquatic. Sirenians are thought to have a 50-million-year-old fossil record (early Eocene-recent). They attained modest diversity during the ...

Evolution of sirenians - Wikipedia

A number of these differences are not unique to the monocots, and while still useful no one single feature, will infallibly identify a plant as a monocot. For example, trimerous flowers and monosulcate pollen are also found in magnoliids, of which exclusively adventitious roots are found in some of the Piperaceae. Similarly, at least one of these traits, parallel leaf veins, is far from ...

Monocotyledon - Wikipedia

Seagrasses are among the most productive habitats in the marine realm, performing several crucial physical and biological ecosystem services. One group of seagrasses is the family Zosteraceae, which includes three to four genera and >20 species inhabiting temperate waters of both the northern and southern hemisphere. Species delineation depends on the type of data used, ranging from ...

Phylogeny and temporal divergence of the seagrass family

Die Blüte einer Pflanze ist " in weitgefasster Definition " ein erst nach Eintritt der Blühreife zu beobachtender unverzweigter Kurzspross mit begrenztem Wachstum, dessen Blätter indirekt oder direkt im Dienst der geschlechtlichen Fortpflanzung stehen: indirekt als Schutz- oder Anlockungsorgane (Blütenhülle), direkt durch die Bildung der Fortpflanzungsorgane (Staubblätter und ...

Blüte " Wikipedia

La figure 1 montre les différentes parties de la feuille : un limbe plan (a) parcouru de nervures (b), avec souvent un pétiole (c) qui rattache la feuille à la tige, parfois élargi en gaine (d). Celle-ci peut « embrasser » la tige comme chez les poacées. Le pétiole peut être absent, la feuille est alors dite sessile.

La evolución biológica es el conjunto de cambios en caracteres fenotípicos y genéticos de poblaciones biológicas a través de generaciones. Dicho proceso ha originado la diversidad de formas de vida que existen sobre la Tierra a partir de un antepasado común. [1] [2] Los procesos evolutivos han producido la biodiversidad en cada nivel de la organización biológica, incluyendo los de ...
