

angiotensin converting enzyme inhibitors pdf

Angiotensin-converting enzyme (EC 3.4.15.1), or ACE, is a central component of the renin-angiotensin system (RAS), which controls blood pressure by regulating the volume of fluids in the body. It converts the hormone angiotensin I to the active vasoconstrictor angiotensin II. Therefore, ACE indirectly increases blood pressure by causing blood vessels to constrict.

Angiotensin-converting enzyme - Wikipedia

An angiotensin-converting-enzyme inhibitor (ACE inhibitor) is a pharmaceutical drug used primarily for the treatment of hypertension (elevated blood pressure) and congestive heart failure.. This group of drugs causes relaxation of blood vessels as well as a decrease in blood volume, which leads to lower blood pressure and decreased oxygen demand from the heart.

ACE inhibitor - Wikipedia

Background. Hypertension, or persistent high blood pressure above 140/90 mmHg, is a prevalent risk factor that is associated with strokes and heart disease. To prevent these events, angiotensin converting enzyme (ACE) inhibitors and angiotensin receptor blockers (ARBs) are used widely to treat hypertension, with ARBs often substituted for ACE inhibitors due to a reputation of having fewer side ...
