Electromagnetically Driven Soft Actuator Federico Fries¹, Shuhei Miyashita², Daniela Rus³, Rolf Pfeifer³, and Dana D. Damian⁴ Abstract—Soft active elements will play a leading role in the development of dexterous and compliant robots.

Electromagnetically Driven Soft Actuator

The past decade has witnessed remarkable advances in stimuli-responsive shape memory polymers (SMPs) with potential applications in biomedical devices, aerospace, textiles, civil engineering, bionics engineering, energy, electronic engineering, and household products.

A review of stimuli-responsive shape memory polymer

A maximum desorption energy peak is observed at a contact angle of 90° . When the contact angle is greater than or less than this point, the desorption energy gradually decreases; thus, the stability of the emulsion decreases as well.

Self-assembly of nanoparticles - Wikipedia

Spintronics is a new field of research exploiting the influence of electron spin on the electrical conduction (or current is spin dependent). The major problem is the realization and fabrication of spintronics based devices.

Spintronics: A contemporary review of emerging electronics

Frank Scheffold — Band gap formation and Anderson localization in hyperuniform disordered photonic materials. In this presentation I will discuss the properties, the fabrication and the characterization of three-dimensional disordered hyperuniform silicon networks, a new type of metamaterials displaying photonic features for electromagnetic vector waves.

In mass spectrometry, matrix-assisted laser desorption/ionization (MALDI) is an ionization technique that uses a laser energy absorbing matrix to create ions from large molecules with minimal fragmentation. It has been applied to the analysis of biomolecules (biopolymers such as DNA, proteins, peptides and sugars) and large organic molecules (such as polymers, dendrimers and other ...

Matrix-assisted laser desorption/ionization - Wikipedia

Human skin is a remarkable organ. It consists of an integrated, stretchable network of sensors that relay information about tactile and thermal stimuli to the brain, allowing us to maneuver within our environment safely and effectively.

Nanotechnology Glossary N

Abstract. Cardiovascular diseases are the leading cause of death worldwide. Despite preventive efforts, early detection of atherosclerosis, the common pathophysiological mechanism underlying cardiovascular diseases remains elusive, and overt coronary artery disease or myocardial infarction is often the first clinical manifestation.

Nanoparticles for diagnosis and therapy of atherosclerosis

Undergraduate Study. The Department of Mechanical Engineering (MechE) offers three programs of undergraduate study. The first of these, the traditional program that leads to the bachelor's degree in mechanical engineering, is a more structured program that prepares students for a broad range of career choices in the field of mechanical engineering.

Department of Mechanical Engineering < MIT

Abstract. Nanomaterials offer new opportunities for cancer diagnosis and treatment. Multifunctional nanoparticles harboring various functions including targeting, imaging, therapy, and etc have been intensively studied aiming to overcome limitations associated with conventional cancer diagnosis and therapy.

Targeting Strategies for Multifunctional Nanoparticles in

Conceived as a participatory effort between researchers and innovators from academic institutions under the Ministry of Human Resource Development (MHRD) along with stake holders from concerned Ministries and industry, IMPRINT was envisaged to bolster challenge driven innovation and translation of knowledge into technology (products and processes).
