Operative Techniques in Otolaryngology-Head and Neck

Surgery is a medical specialty that uses operative manual and instrumental techniques on a patient to investigate or treat a pathological condition such as a disease or injury, to help improve bodily function or appearance or to repair unwanted ruptured areas.. The act of performing surgery may be called a "surgical procedure", "operation", or simply "surgery".

Strabismus surgery (also: extraocular muscle surgery, eye muscle surgery, or eye alignment surgery) is surgery on the extraocular muscles to correct strabismus, the misalignment of the eyes. With approximately 1.2 million procedures each year, extraocular muscle surgery is the third most common eye surgery in the United States. The earliest successful strabismus surgery intervention is known to ...

x Catastrophic, or life threatening, haemorrhage is recognised as the leading cause of preventable death in trauma patients [1] and is also prevalent in medical conditions such as obstetric complications, gastrointestinal bleeding and surgical patients with intra-operative or post-operative complications [2,3]. Patients are at particular risk of deterioration in the pre-hospital environment.

x Extreme obesity is associated with a significant psychosocial burden, including impairments in quality of life, body image, sexual behavior, and other areas of psychosocial functioning [1]. This distress, along with the physical burden of obesity and its co-morbidities, is believed to contribute to the decision to have bariatric surgery.
